簡介

AI Application Engineer specializing in enterprise AI agent systems, multi-agent orchestration, and workflow automation. Experienced in designing LLM-driven workflows, backend-integrated AI agents, and modular tool-invokable services for CRM automation. Skilled in API integration, stateful agent workflows, and scalable backend architecture using Python, C#, and RESTful APIs. Passionate about building reliable and production-ready AI systems for real-world enterprise applications.

經歷

鼎新數智股份有限公司

9 個月

AI Application Engineer

2026 年 1 月 - Present (5 個月)

新店

- Built AI agents and reusable skill packages from scratch on an enterprise Agentic AI platform to automate CRM repair operations, dispatching, scheduling, and route-planning workflows.
- Evolved CRM automation architecture from prompt-based API execution into orchestrated multi-agent systems, workflow-driven execution pipelines, and reusable AI skills.
- Developed hybrid AI execution pipelines integrating LLM nodes, JavaScript function logic, enterprise APIs, conditional routing, and state-driven workflow orchestration.
- Designed modular AI capabilities for repair-task querying, dispatch management, maintenance scheduling, notification handling, and route-planning automation.
- Integrated Google Maps APIs and enterprise CRM services to support travel-time estimation, field-service scheduling, operational validation, and workflow execution.
- Refactored legacy CRM maintenance and scheduling modules into scalable backend services and agent-invokable execution components for enterprise AI integration.

- Designed and documented RESTful APIs using OpenAPI (Swagger), collaborating with cross-functional teams to deliver enterprise AI workflow and orchestration solutions.

Software Engineer

2025 年 9 月 - 2025 年 12 月 (4 個月)

新店

- Owned system design, implementation, and quality control for CRM customization, translating requirements into scalable features.
- Developed modules, UI, and backend logic using C#, .NET Framework, ASP.NET Web Forms, and SQL Server.
- Improved development documentation with updated, practical implementation guidance.
- Mentored and onboarded a new team member, reducing ramp-up time by ~40%.
- Performed testing and debugging to ensure feature quality before UAT.

Quality Assurance Intern

2025 年 2 月 - 2025 年 8 月 (7 個月)

新店

- Executed functional testing for the "活力細胞" mobile app and its web-based management dashboard by designing test cases, reporting issues, and validating fixes, ensuring high-quality releases.
- Performed functional and exploratory testing for the MegoLuki mobile app, verifying core user flows, UI/UX behavior, and feature stability across different scenarios, and collaborating with the team to identify and report defects.
- Performed structured motion testing (nodding, shaking) for Cleer wireless headphones under exercise and public transportation scenarios, collecting sensor accuracy data to validate motion-triggered features and improve device stability.
- Collected and analyzed real-world sensor and firmware performance data for Oura Ring wearable devices, supporting engineering teams in validating sensor accuracy and ensuring reliable firmware updates.
- Performed API integration testing using Postman to validate response accuracy, logic, and formatting, increasing defect detection efficiency and improving backend–frontend consistency.
- Managed defect lifecycle and coordinated cross-team issue resolution in Jira within an Agile environment, streamlining sprint workflows and accelerating feature delivery.

- Developed Python automation scripts to validate machine learning model accuracy, increasing test coverage and reducing manual verification effort.
- Validated machine learning model predictions against defined criteria and collaborated with engineers to improve model quality and ensure production readiness.
