CHIH CHI CHEN

AI Engineer @ Datasys | Agentic AI | LLM Applications | Workflow Automation
台灣

簡介

AI Application Engineer specializing in enterprise AI agent systems, multi-agent orchestration, and workflow automation.Experienced in designing LLM-driven workflows, backend-integrated AI agents, and modular tool-invocable services for CRM automation. Skilled in API integration, stateful agent workflows, and scalable backend architecture using Python, C#, and RESTful APIs.Passionate about building reliable and production-ready AI systems for real-world enterprise applications.

經歷

鼎新數智股份有限公司

AI Engineer
2025 年 9 月 - 2026 年 11 月 (1 年 3 個月)
台灣 新北市 新店

• Contributed to the development and release of CRM AI skills and workflows from the ground up on Digiwin’s enterprise AI agent platform, covering repair and maintenance services, scheduling and notifications, sales opportunity management, customer interactions, visit planning, and quotation processing.
• Designed and developed 8 main AI skills, 22 sub-skills, and 7 automated workflows, implementing tool calling, API integration, conditional branching, workflow handoffs, and error handling to support multi-step CRM operations.
• Built modular, reusable AI skills and workflows using prompt engineering and JavaScript for data transformation, validation, and workflow state management. Utilized the platform’s existing RAG capabilities for enterprise knowledge base retrieval and OCR capabilities for document recognition and data extraction.
• Developed C#/.NET backend APIs with OpenAPI/Swagger documentation to integrate CRM functions with AI skills and workflows. Integrated the Google Maps Routes API for driving distance and travel time calculations, and independently implemented location-based customer filtering for radius-based searches and visit planning.

• Collaborated with geographically distributed teams on requirements analysis, workflow design, system testing, UAT, and feature demonstrations. Also independently developed and tested custom CRM frontend and backend features and handled SQL Server data operations.

• Executed functional testing for the "活力細胞" mobile app and web-based management dashboard by designing test cases, reporting defects, and validating fixes to ensure release quality.
• Performed functional and exploratory testing for the MegoLuki mobile app, validating user flows, UI/UX behavior, and feature stability across multiple scenarios.
• Conducted motion testing for Cleer wireless headphones under exercise and public transportation scenarios, collecting sensor accuracy data to validate motion-triggered features.
• Conducted API testing for LLM-powered applications using Postman, validating response accuracy, formatting, and prompt-driven behavior across diverse user scenarios.
• Managed defect tracking and cross-functional issue resolution in Jira within Agile sprints, supporting efficient bug resolution and feature delivery.
• Developed Python automation scripts and validated machine learning model predictions, increasing test coverage and reducing manual verification effort.
